

Signalling panel for both visual and thermal viewing

Manufactured in the UK by an ISO 9001 certified NATO approved supplier

Ultra-lightweight Thermal Identification Marker (TIM) weighing only 68g, the only easily deployable marker. The panel produces a contrasting image to the surrounding environment when viewed through thermal optical equipment.

TIM provides a strong cold thermal signature across a wide range of deployment angles, typically and elevation between 10¼ to 120¼ from vertical produces the strongest signal.

Constructed from light weight nylon based cloth and backed by a reverse highly visible side, the panel can be attached to the 20mm OD anodised brass corner eyelets. This enables multiple TIMs to be joined together creating larger thermal images.

Sizes available:

TM4B941 - 600 x 600mm
TM1109 - 1000 x 1000mm

Custom sized markers can be supplied.
